*There is no cost to families. If the child has insurance and/or Medicaid coverage, the insurance company may be billed only with written parent permission.*

Nevada Early Intervention Services  
State of Nevada Division of Health  
Southern Region

Serving Children & their Families  
in urban & rural Clark, Nye, Esmeralda,  
and Lincoln Counties.

Early Intervention during the first years of a child's life can make a big difference in the future of a child.

The Nevada Early Intervention Services, administered by the State Health Division, offers four early intervention programs for families with young children under the age of three.

**Contact Nevada Early Intervention Services to access any of the following four programs:**

**Hearing Screening Program-** Hearing screenings are available for any child under the age of three who may have a hearing concern and/or has failed the newborn screening at the hospital.

**Early Intervention Developmental Program-** Provides services to children from birth to age of three with disabilities or developmental delays. A Service Coordinator (usually a Developmental Specialist with a certification in Early Childhood Special Education) is assigned to every child and family. The Service Coordinator is the central contact for the family in teaching and modeling strategies for the family to help their child's individual, developmental needs. The Service Coordinator leads a team of various professionals who are working together with the family to reach the desired outcomes identified by the family. The Service Coordinator incorporates the support from the other team members into natural learning opportunities which can be practiced many times throughout the day by the child. The focus is on increasing the child's participation in existing or desired family activities and supporting the family by building on their strengths.

**Specialty Clinics-** Services are available in the areas of Genetic Disorders, Metabolic Disorders, and Craniofacial/Cleft Palate. These Clinics are held only at the regional early intervention sites.

**Screening & Monitoring Program-** Provides developmental screening for children who are at risk for developmental delay. This program also offers information on activities to help the child learn new skills.

### Values & Mission

**Children are special & unique:** Children grow, develop & learn in the context of relationships with their families and other caregivers in everyday routines, activities, & community settings.

**Families are central to decision making:** Families are partners & decision-makers in all aspects of services, as they are the experts about their child's and family's needs. All services are voluntary.

**Early Intervention role:** The role of early intervention is to team across disciplines with the family. Mutual trust, respect, honesty & open communication characterize the family-provider relationship, building on family strengths.

**Services & Supports:** Services, supports and resources need to be timely, flexible, individualized and responsive to the changing needs of children and their families.
